

TECHICAL SHEET

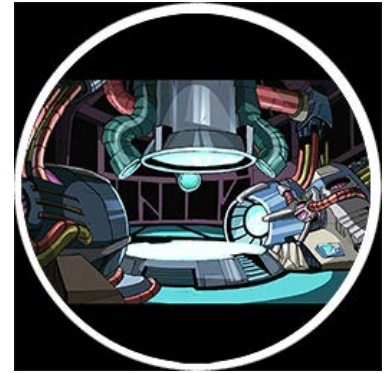

TECH TYPE: Holographic display system

TECH NAME: Holotrasmmitter

VERSION NUMBER: 1st Generation

PURPOSE: This device was created to allow long range communication. The system was based on the Transmat System. Unfortunately, the system was not a complete success. The system can't transmit any information back to the main unit. There is also a theory that if the system hits the same area for too long then there is a chance that it could cause a major problem.

EFFECTS: Creates holographic project and sound to a remote location.

CYCLE RATE: 8.6 seconds

LOCATION SHIFT: One foot in a random location

COMMUNUCATION RANGE: Anywhere on the planet

LIMITATION: If the projector does not change its location (based on the Cycle rate) then there is a chance that the projector could cause a tear in reality!
